Question **1**

Correct

Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int find_floor(int arr[], int left, int right, int x) {

    if (left > right) {
        return -1;
    }
    int mid = left + (right - left) / 2;
    if (arr[mid] == x) {
        return arr[mid];
    }
    if (arr[mid] < x) {
        int candidate = find_floor(arr, mid + 1, right, x);
        return (candidate == -1) ? arr[mid] : candidate;
    } else {
        return find_floor(arr, left, mid - 1, x);
    }
}

int main() {
    int n;

    scanf("%d", &n);
    int arr[n];
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }
    int x;
    scanf("%d", &x);
    int floor_value = find_floor(arr, 0, n - 1, x);
    if (floor_value != -1) {
        printf("%d",floor_value);
    } else {
        printf("%d\n", x);
    }

    return 0;
}
```
